

Hi Gavan

I have completed the installation of my three cell hydrogen injection unit which I purchased from you last month. *(See the pictures I sent you earlier).*

I have taken my vehicle, *(Ford Transit, 2001 VH, 2.4 Turbo Diesel Motor home)* on a 100 kilometre test drive and have found a fuel economy improvement of approximately 33%.

The actual installation process was not really difficult but what I do recommend to any other purchasers that they get a professional auto electrician to install the electronic device you recommended as it does require a Scan tool to read and adjust the settings of the vehicles on-board computer.

As you can imagine I am very happy with the results, but I am also waiting for the results of much longer road trip tests of the unit.

I will keep you informed of the results as time goes by.

Could you please send me the mixtures of water and caustic soda for continuable replenishing of the unit and also the mixture ration for the three weekly cleaning of the plates with red-ex I believe you stated.

Please note that I am attending a National Rally of a motor home club in October which has a membership of over 60,000 members and if all continues as well as expected with my device I would be happy to take any marketing material you have to the rally to promote your units.

Looking forward to hearing from you soon.

Regards

Paul Morris
